GoDaddy Web Build-A-Thon

**PRE-REQUISTITES FOR THE TRANING**

1. Have a Business Theme in mind for the website layout and Design. For example, you could choose to build a website for an institute, restaurant, corporates, or a personal Blog.
2. Try to give that theme a "Identity". For example, if you choose to build a website for a restaurant you could call it tastyfood.com or if you choose to build a personal blog, you could use your own name such as yourname.com.
3. Identity your favourite colours (2-3 maximum)
4. Think of a Tagline that defines the theme for example, I am a WordPress Trainer, and my business tagline is "Turning dreams into reality".
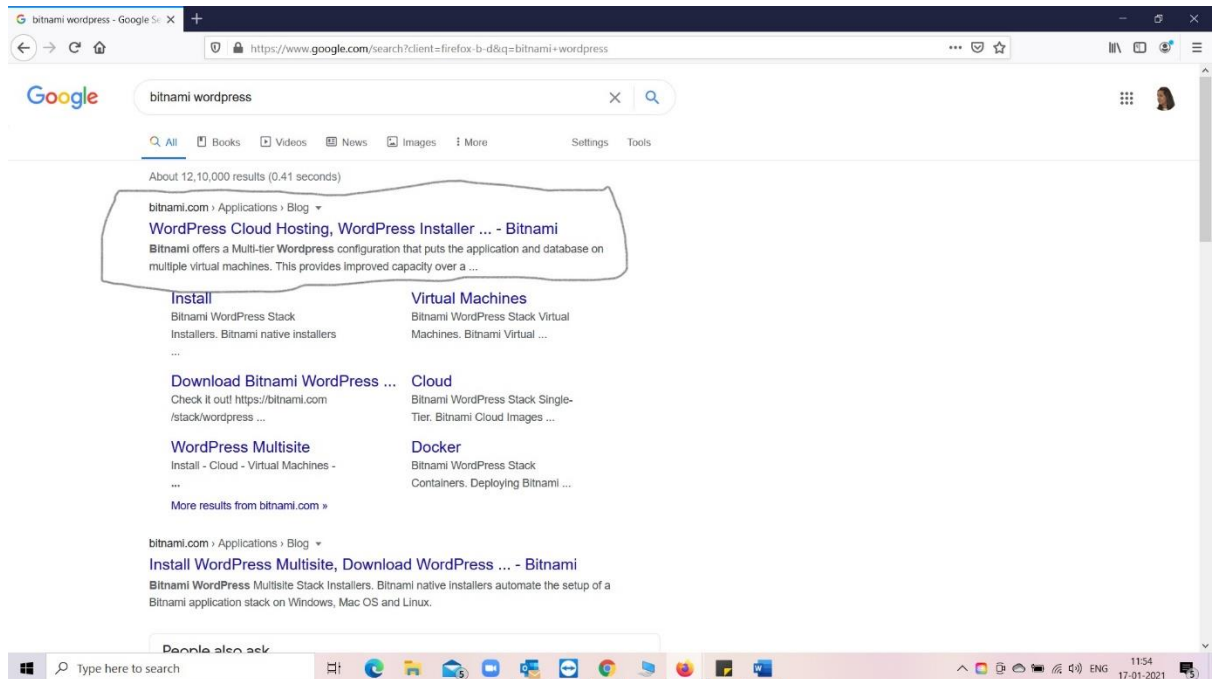

You are ready!

One more step before you come to the training.
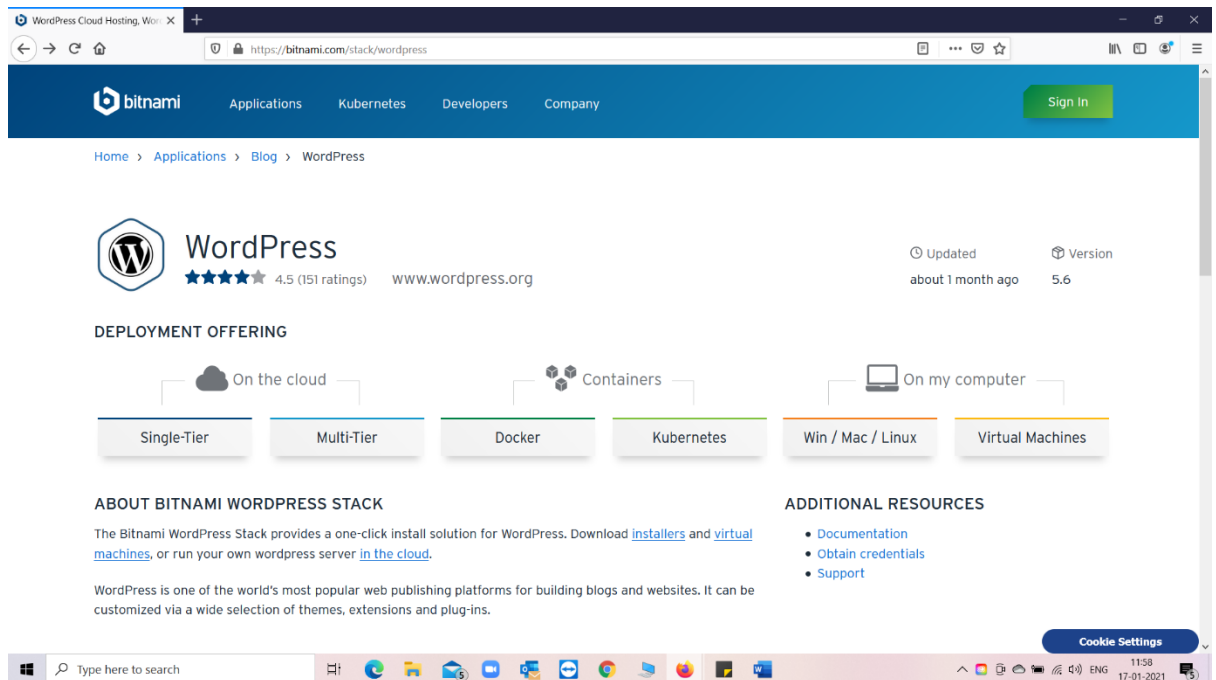

HOW TO INSTALL WORDPRESS ON YOUR SYSTEM LOCALLY

1. **Go to google and type "Bitnami Wordpress" and you will get the below screenshot.**

## 2. Click the first link.

3. You will see a screen like this.

4. **Click on Win/Mac/Linux under "On my computer" and as soon as you click you will see the three option under "download WordPress stack installers"**

5. **Click on the Download button as per your system type.**
6. **As you can see in the screenshot, such a file will be downloaded. Keep that ready**

**The rest of the installation process would be conducted during the training.
